Ivan Zakutnii

DevOps Engineer with solid database administration background, seeking to expand expertise in software development.

Proficient in Kubernetes administration, GitLab CI/CD, and Helm charts composition.

Excited to take on coding tasks and solve complex problems. Eager to learn new technologies and broaden skills in less commonly known areas.

Goal-oriented to transition towards the Dev field and contribute diverse skill set to development teams.

Education

2017
Programming Technician
TMC College

2016
Information Security Technician
TMC College

Expertise

- Kubernetes
- CI/CD (Gitlab + Helm)
- IaC (Terraform)
- Golang
- Postgresql
- AWS

Language

English

Russian

Skills

- **Go | Kubernetes | Terraform | Puppet | AWS | PostgreSQL | MySQL | ClickHouse | Git**
- **GitLab Ci/CD | Helm | Puppet | Backend | Deckhouse | Werf | MongoDB | Python | Bash**
- **Nginx | Prometheus | Grafana | Ansible**

Experience

2021 — Present
at Flant
DevOps Engineer

- Maintained and supported highly available containerized systems, collaborating with cross-functional teams.
- Worked with cross-functional teams to improve release management processes, ensuring smooth and efficient software releases using Docker, Helm, and Werf in CI/CD pipelines.
- Administered and monitored Kubernetes (Deckhouse) clusters, ensuring stability and performance.
- Monitored and optimized system performance, leveraging tools like Prometheus, Grafana.
- Rapidly identifying and troublshooting complex technical issues to minimize downtime and ensure system reliability.
- Developed Kubernetes informers for workflow automation.
- Managed Linux server infrastructure and optimized Nginx configurations.
- Implemented infrastructure as code (IaC) principles using Terraform and Puppet.
- Configured DNS and CDN on CloudFlare, Azure, and AWS.

2020 — 2021
at DataBase Intelligence
Database Administrator / Reliability Engineer

- Demonstrated expertise in administering and maintaining Oracle, PostgreSQL, MongoDB, and MarklogicDB databases, ensuring seamless availability and optimal performance.
- Developed and implemented robust backup and recovery strategies for critical databases, effectively minimizing potential data loss during system failures or disasters.
- Proficient in analyzing SQL scripts and optimizing queries, resulting in improved database performance and reduced server load.
- Automated routine tasks and procedures using Bash scripting, significantly enhancing operational efficiency and minimizing manual errors.
- Provided maintenance and support for Linux server infrastructure, primarily CentOS and Oracle Linux, in conjunction with DBMS systems.
- Leveraged AWS to efficiently provision, deploy, and manage RDS systems, leveraging cloud-based solutions for scalable and reliable database management.
- Conducted regular performance audits and successfully implemented optimization strategies to enhance database response times and overall user experience.
