Ivan Zakutnii

DevOps Engineer with solid database administration background, seeking to expand expertise in software development.

Proficient in Kubernetes administration, GitLab CI/CD, and Helm charts composition.

Excited to take on coding tasks and solve complex problems. Eager to learn new technologies and broaden skills in less commonly known areas.

Goal-oriented to transition towards the Dev field and contribute diverse skill set to development teams.

Skills

- **Go | Kubernetes | Terraform | Puppet | AWS | PostgreSQL | MySQL | ClickHouse | Git**
- **GitLab Ci/CD | Helm | Puppet | Backend | Deckhouse | Werf | MongoDB | Python | Bash**
- **Nginx | Prometheus | Grafana | Ansible**

Experience

2021 — Present
at Flant
DevOps Engineer

- Maintained and supported highly available containerized systems, collaborating with cross-functional teams.
- Worked with cross-functional teams to improve release management processes, ensuring smooth and efficient software releases using Docker, Helm, and Werf in CI/CD pipelines.
- Administered and monitored Kubernetes (Deckhouse) clusters, ensuring stability and performance.
- Monitored and optimized system performance, leveraging tools like Prometheus, Grafana.
- Rapidly identifying and troublshooting complex technical issues to minimize downtime and ensure system reliability.
- Developed Kubernetes informers for workflow automation.
- Managed Linux server infrastructure and optimized Nginx configurations.
- Implemented infrastructure as code (IaC) principles using Terraform and Puppet.
- Configured DNS and CDN on CloudFlare, Azure, and AWS.

2020 — 2021
at DataBase Intelligence
Database Administrator / Reliability Engineer

- Demonstrated expertise in administering and maintaining Oracle, PostgreSQL, MongoDB, and MarklogicDB databases, ensuring seamless availability and optimal performance.
- Developed and implemented robust backup and recovery strategies for critical databases, effectively minimizing potential data loss during system failures or disasters.
- Proficient in analyzing SQL scripts and optimizing queries, resulting in improved database performance and reduced server load.
- Automated routine tasks and procedures using Bash scripting, significantly enhancing operational efficiency and minimizing manual errors.
- Provided maintenance and support for Linux server infrastructure, primarily CentOS and Oracle Linux, in conjunction with DBMS systems.
- Leveraged AWS to efficiently provision, deploy, and manage RDS systems, leveraging cloud-based solutions for scalable and reliable database management.
- Conducted regular performance audits and successfully implemented optimization strategies to enhance database response times and overall user experience.

Education

2017
Programming Technician
TMC College

2016
Information Security Technician
TMC College

Expertise

- Kubernetes
- CI/CD (Gitlab + Helm)
- IaC (Terraform)
- Golang
- Postgresql
- AWS

Language

English

Russian
